# Configurar un proyecto en Ortools usando VS

Tutorial by amigo de Cueto.cpp

# Requisitos

- MinGW (U otro compilador de c++)
- Cmake (Se necesita instalar en el path)
- Visual Studio (Enterprise/Community 2022/Enterprise 2022)

## Paso 1:

Ir al repositorio y descargar el proyecto

Descargar

## Paso 2:

#### **Importante**

Ejecutar todo con el símbolo de sistema de herramientas nativas x64 (no el símbolo de desarrolladores)

En este tutorial se usará el MinGW Command Prompt

Entra a la carpeta de Ortools

cd C:\Users\HP\Desktop\Ortools

## Paso 3:

Entra al proyecto que deseas probar, ejemplo

# Paso 4 (Opcional):

Crea un directorio y trabaja desde ahí

mkdir build cd build

## Paso 5:

Buildea el proyecto con:

```
cmake -DCMAKE_BUILD_TYPE=Release -DCMAKE_PREFIX_PATH="C:\Users\HP\Desktop\Ortools" -S .. -B .
```

#### OJO:

```
Donde esta DCMAKE PREFIX PATH = " (Aquí debe estar la ruta de tu Ortools) " -S .. -B .
```

Ese es tu path y es donde se saca las librerías y todo lo que se necesita para buildear un proyecto

## Paso 6

Compila el proyecto con lo siguiente

Solo debería detectar un archivo .cc

```
cmake --build . --config Release
```

Ejemplo:

```
1>Checking Build System
Building Custom Rule C:/Users/HP/Desktop/or-tools_x64_VisualStudio2022_cpp_v9.10.4067/examples/vrp_drop_nodes/CMakeLists.txt
vrp_drop_nodes.cc
```

## Paso 7

Si no ha aparecido ningún error hasta ahí se debería poder ejecutar el .exe generado en el paso 6. Para eso

#### Si creaste un build

```
cd Release
cd bin
NombreDelArchivo.exe
```

#### Resultado:

```
C:\Users\HP\Desktop\or-tools_x64_VisualStudio2022_cpp_v9.10.4067\examples\vrp_drop_nodes\build>cd Release
 :\Users\HP\Desktop\or-tools x64 VisualStudio2022 cpp v9.10.4067\examples\vrp drop nodes\build\Release>cd bin
  :\Users\HP\Desktop\or-tools_x64_VisualStudio2022_cpp_v9.10.4067\examples\vrp_drop_nodes\build\Release\bin>vrp_drop_nodes.exe

# Usar las librerías de ortools a conveniencia

Para crear y usar las librerías del ortools a conveniencia es necesario que crees una carpeta con lo siguiente

```
Carpeta

|
|
|
|__ Archivo.cc
|
|
| CMakeLists.txt
```

# Paso 0

Si no sabes como crear un archivo cmake, solo copia y pega esto:

Nota: Solo debes cambiar 2 cosas aquí (Dependiendo del nombre de tu archivo .cc) **Cambia** todos los "hola" que veas en el siguiente código

```
cmake_minimum_required(VERSION 3.18)
option(CMAKE_EXPORT_COMPILE_COMMANDS "Export compile command" OFF)
project(hola VERSION 1.0 LANGUAGES CXX)
message(STATUS "${PROJECT_NAME} version: ${PROJECT_VERSION}")

include(GNUInstallDirs)
install(TARGETS ${PROJECT_NAME})
```

# Paso 1

Entra a la carpeta que tengas

cd C:\Users\HP\Desktop\hola

#### **Importante**

Ejecutar todo con el símbolo de sistema de herramientas nativas x64 (no el símbolo de desarrolladores)

En este tutorial se usará el MinGW Command Prompt

# Paso 2 (Opcional)

Crea un directorio y trabaja desde ahí

mkdir build
cd build

# Paso 3

Buildea el proyecto, ya en la url que tengas debes escribir lo siguiente

```
cmake -DCMAKE_BUILD_TYPE=Release -DCMAKE_PREFIX_PATH="C:\Users\HP\Desktop\Ortools" -S .. -B .
```

#### OJO:

Donde esta DCMAKE\_PREFIX\_PATH = " (Aquí debe estar la ruta de tu Ortools) " -S .. -B .

Ese es tu path y es donde se saca las librerías y todo lo que se necesita para buildear un proyecto

## Paso 4

Compila el proyecto con lo siguiente

Solo debería detectar un archivo .cc

```
cmake --build . --config Release
```

# Paso 5

# Si creaste un build

cd Release
cd bin
NombreDelArchivo.exe

Nota: En teoría ya debería estar todo compilado
